

Friday 5th June: English

When you throw away plastic it often ends up in the ocean causing a lot of harm to the wildlife that live there. Here are some pictures to show the damage that single use plastic can do to the lives of creatures that live in our oceans.

Your challenge is to write a persuasive letter to the parents at Firs about reducing the amount of single use plastic they use.

Things to think about:

What can people do to reduce the amount of single use plastic they use?

What do people do already? Could they do more of this?

Key vocabulary:

Single use plastic- this is something plastic that you do not reuse, you will only use it once and then throw it away.
