

Monday 8th June: Geography

On a map of the world label the equator, tropics, hemispheres and poles.

Use the information below to help you understand what all of these things mean.

Equator, Tropics, Hemispheres and Poles of the World

Word Bank

- Equator
- Tropic of Cancer
- Tropic of Capricorn
- Northern Hemisphere
- Southern Hemisphere
- North Pole
- South Pole

Divisions of the Earth

The Earth can be divided in many ways.

Today, we will learn about the seven most important divisions on the planet:

- equator
- northern hemisphere
- southern hemisphere
- tropic of Capricorn
- tropic of Cancer
- North Pole
- South Pole

Let's find out more!

Equator

- The equator is an imaginary line that divides the Earth in half.
- The equator is an equal distance between the North and South Poles.
- The weather on the equator is hot all year round.
- At the equator, day and night are both 12 hours long.

Did You Know?

Although the weather is generally hot, there is a mountain on the equator where you can ski!

Northern Hemisphere

- The part of the Earth north of the equator is called the northern hemisphere.
- 80% of the world's population lives in the northern hemisphere.
- 90% of land is in the northern hemisphere.
- The northern hemisphere includes all of north America, Europe and most of Asia and Africa.

Southern Hemisphere

- The part of the Earth south of the equator is called the southern hemisphere.
- Only 20% of the world's population lives in the southern hemisphere.
- 90% of the planet's water is in the southern hemisphere.
- The southern hemisphere includes all of Australia, Antarctica and most of South America.

Did You Know?

When it is winter in the southern hemisphere, it is summer in the northern hemisphere!

Tropic of Cancer

- The tropic of Cancer is an imaginary line in the northern hemisphere.
- It is also called the northern tropic.
- It is the furthest north you can ever go and still have the sun directly overhead.
- This happens once a year in June. This day is called the solstice.

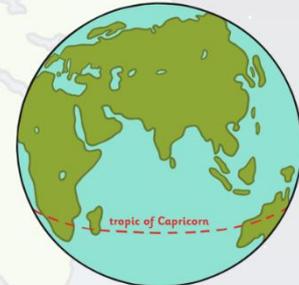

Did You Know?

In Latin, the language the Romans spoke, 'cancer' means crab!

Tropic of Capricorn

- The tropic of Capricorn is an imaginary line in the southern hemisphere.
- It is the opposite of the tropic of Cancer.
- Similar to the tropic of Cancer, it is the furthest south you can go and still have the sun directly overhead.
- This happens once a year in December. This day is also called the solstice.

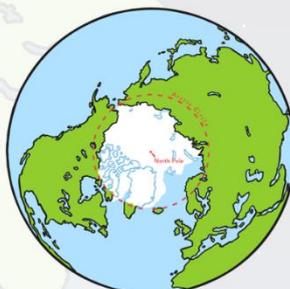

Did You Know?

Every year, both tropics move north or south a little bit!

North Pole

- The North Pole is the northernmost point on Earth.
- There is no land at the North Pole, only ice. The ice is about three metres thick.
- No one owns the North Pole. It is in international waters.
- In summer, the sun never sets.

Did You Know?

At the North Pole, no matter which way you point, you will always face south!

South Pole

- The South Pole is the southernmost place on Earth.
- It is located on land topped by more than 2700 metres of solid ice.
- The South Pole is much colder than the North Pole.
- There is a scientific base at the South Pole where between 50 and 200 scientists live and work.

Did You Know?

The first person to reach the South Pole was also the first official person to reach the North Pole. His name was Roald Amundsen!
