Date	18.01.21
Subject/s	Maths
Learning Objective 	To find percentages of an amount

		SA 	TA 
Success Criteria 	I know the whole is 100%		
	I can use my knowledge of factors to divide both sides 100% = 320 50% = 160		
	I can add together to make the total 100% = 320 10% = 32 1% = 3.2 11% = 35.2

Problem Solving and Reasoning

Explain it!

Henry says,

To find 10% you divide by 10, so to find 50% you divide by 50

Do you agree? Explain why.

Use it!

Amy and Judy shared 25% of a 1 kg bar of chocolate.

Amy ate a quarter of the amount that Jude ate.

How much did they each eat?

How much less did Amy eat than Judy?

Use it!

50% of 300	5% of 20	25% of 244
10% of 890	1% of 120,000	50% of 9402
25% of 225,000	10% of 85,610	5% of 600

Using the table above,

- What's the biggest total you can make using only 3 amounts?
- What's the smallest total you can make using 3 amounts?
- Can you make exactly 300? How?

Explain it!

Four children in a class were asked to find 20% of an amount, this is what they did:

I divided by 5 because 20% is the same as one fifth.

I found one percent by dividing by 100, then I multiplied my answer by 20

Hannah

I did 10% add 10%

I found ten percent by dividing by 10, then I multiplied my answer by 2

Janet

Who do you think has the most efficient method? Explain why.

Who do you think will end up getting the answer incorrect?

Answers

Henry is wrong because 50% is equivalent to a half so to find it you divide by 2

Judy ate 200 g,
Amy ate 50 g

Amy ate 150 g less than Judy

a) Largest: 146,561

b) Smallest: 153

c) 50% of 300 +
1% of 120,000 +
5% of 600 = 300

50% of 300 150	5% of 20 1	25% of 244 61
10% of 890 89	1% of 120,000 120	50% of 9432 4716
25% of 225,000 56,250	10% of 85,000 8,500	5% of 600 30

Children to write which one they think is the most effective answer and explain their reasons.

Further Challenge

1. What is 20% of 30% of 40% of £50?
Would you rather?

Would you rather.....

2. Have 10% of £5 or 75% of 80p?
