Lockdown

Date	
Subject/s	<u>Maths</u>
Learning Objective 	To convert units of length

		SA 	TA 
Success Criteria 	I know there are 10mm in 1cm		
	I know there are 100cm in 1 m		
	I know there are 1000m in 1 km		
	I can use or imagine a place value grid to multiply and divide by 10, 100 and 1000		
Support	Independent	Adult Support ()	Group Work

Pre-task:

Convert these units:

67mm = _____ cm

_____ mm = 3.7cm

298cm = _____ m

_____ cm = 0.879m

789m = _____ km

_____ m = 1.09km

Problem Solving and Reasoning

Explain it!

Sam thinks his chew bar is 13.2 *cm* long.

Do you agree? Explain why.

Use it!

Dominic, Emma and Annabelle jumped a total of 34.77 m in a long jump competition.

Emma jumped exactly 200 cm further than Dominic.

Annabelle jumped exactly 2,000 mm further than Emma.

What distance did they all jump?
Give your answers in metres.

Use it!

Hamid made a stack of his collection of fishing magazines. Each magazine on the pile 2.5 mm thick. The total height of the stack was 11.5 cm high. How many magazines did he have in his pile?

Explain it!

Ribbon is sold in 200 mm pieces.
Georgie buys 4 metres of ribbon.
How many pieces does she buy?

Ribbon costs 26 p per piece.
There are 2 special offers on the ribbon.

Five pieces for
the price of four.

1 metre of ribbon
for only £1

Which is the best offer?
Explain your answer.

Use it!

A plank of wood is 5.8 metres long.

Two lengths are cut from the wood.

175 cm

$3\frac{4}{5}$ m

How much of the wood is left?

Use it!

A 10 pence coin is 2 mm thick.

Daniel makes a pile of 10 pence coins worth £1.30

What is the height of the pile of coins in centimetres?

Explain it!

Kim says;

'One metre is 100 times bigger than one centimetre. One centimetre is 10 times bigger than one millimetre. So, one metre is 110 times bigger than one millimetre.'

Is Kim correct?

Explain your answer.

Answers

Sam is wrong because his chew bar doesn't start at zero, it is actually 8.8 cm long.

Dominic jumped 9.59 m
Emma jumped 11.59 m
Annabelle jumped 13.59 m

There are 46 magazines in Hamad's pile.

Georgie buys 20 pieces of ribbon.
1 metre of ribbon for £1 is the best offer because buying five pieces (1 metre) for the price of four would cost £1.04

There is 25 cm left.

The pile of coins is 2.6 centimetres tall.

Kim is incorrect. She has added the number of times bigger together rather than multiplying.
One metre is 1,000 times bigger than one millimetre.

Further Challenge

Chippy the Robot was sent on a journey.

Chippy started from his base station and went 2m (metres) N (North).
Then he turned and went 2m E (East), 3m N, then 3m W (West) and 2m S (South).
After that he went 2m E, 3m N and 3m W again.
Then he went 5m S and 4m E.
Finally, he went 1m S.
There he stopped.

How many metres altogether did Chippy travel on that journey?
How far and in what direction must Chippy travel to get back to his base station?

The next day Chippy went on another journey.

This time he started 3 m (metres) West and 4 m North of his base station. He went 6 m E, 2 m N, 4 m W and 1 m S. He then turned round and retraced his movements for 4 m.

Where did he end up?
Can you find the shortest route to get him back to his base station?
How many metres did he have to go to get back?
Can you find him a route back which is exactly 12 m?
How many different 12 m routes can you find?
