

Wednesday 23rd October

Today, we had a visit from Dr Ian Parker Heath, who taught us about life during the Stone Age, Bronze Age and Iron Age. We explored the job of an archaeologist and understood how artefacts tell us about the past.

History

Memorable Experience

Paleolithic is Greek for Old Stone.
Mesolithic is Greek for Middle Stone.
Neolithic is Greek for New Stone.

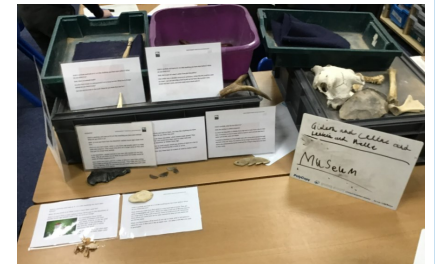

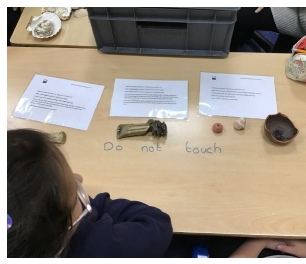

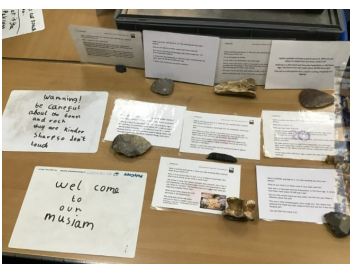

Dr Parker Heath told us that archeology is rubbish! We looked through some rubbish and begin inferring who it might have belonged to. This is something archeologists have to do when they find artefacts.

We then made our own timeline, going back 12,000 years! We placed lots of different time periods so we could see how long ago the Stone Age was. It was over 6500 years ago!

We became archeologists!

We used special tools to scrape and dig the artefacts from the sand. Then we classified them into their materials. What were they made from? Then, we found out more about the objects and made our own museums to display them.

We went back in time to live like the Stone Age people!

We ground our own flour. We weaved our own material. We made our own jewellery. We made our own pots to drink from.
